3 essential forms of Calcium with Vitamin C for Immune Support & has Anti-Oxidant properties

Cal-C-Kids Junior Powder is a new formulation with three different forms of calcium, to help children develop stronger bones and teeth. It also contains Vitamin C, which is essential for a healthy immune system as well as being a scientifically proven anti-oxidant.

- This New Formulation is specifically designed to meet the requirements of growing kids.
- It is an ideal supplement for kids who are 1 year and older.
- Assists in children that are teething.
- Easy and simple to administer, as it can be sprinkled onto cereal or food and can also be dissolved in water or milk.
- Cal-C-Kids Junior Powder is paid for by most Medical Aids.

Calcium and Vitamin C are vital supplements in all stages of childhood development.

Ingredients:

Calcium Glycerophosphate:

Very important for the development of strong teeth as well as the prevention of plaque build-up.

Calcium Lactate:

Is necessary for bone, teeth and tissue maintenance, as well as for muscle and nerve function.

Calcium Ascorbate:

This form of calcium is absorbed easier into the blood when compared to other forms of calcium. Calcium ascorbate is

coupled with Vitamin C, which delivers the benefits of both, Calcium and Vitamin C.

Vitamin C helps to improve immune support and is an excellent anti-oxidant. It also promotes healthy muscle, connective tissue and skin.
